

Career Objective

Full-Stack Developer (Next.js & Typescript) with experience building production-grade web applications. Currently interning at Trupeer AI, leading frontend revamp and building secure, scalable systems (WASM, Redis, Web Codecs API). Strong focus on performance, UI/UX, and end-to-end ownership.

Technical Skills

Frontend

Next.js, React, TypeScript, Tailwind CSS, Shadcn/ui, Motion

Backend

Node.js, Express

Data & Media

MongoDB, Firebase, MySQL, Cloudinary, Cloudflare R2, Cloudflare D1, IndexedDB

Auth/Security

Firebase, JWT, reCAPTCHA, Auth0, Fingerprint.js, Upstash Redis

Testing

Vitest, Happydom, RTL

UI/UX & Design

Framer, Figma

Dev Tools & AI

GitHub + Copilot, Claude, Postman, Vercel,

Akshit Bansal

Full-Stack Developer (Next.js & Typescript)
Punjab, India

Experience

Trupeer AI (trupper.ai)

Full-Stack Intern

January 2026 - Ongoing (6-Months), Bangaluru

Contributed across a distributed, microservices-oriented architecture spanning a Next.js web application, Chrome extension, and Node.js backend — interfacing with REST APIs, MongoDB, Redis, third-party webhooks, and containerized deployments throughout the feature lifecycle.

- **Subtitle System:**
Eliminated server-side subtitle processing by engineering a fully client-side pipeline using FFmpeg WASM and ElevenLabs Scribe v2 for in-browser transcription and SRT editing; reduced compute costs ~70% and enabled 90+ language support.
- **Chrome Extension Recording Pipeline:**
Migrated from MediaRecorder to the Web Codecs API; replaced in-memory buffering with IndexedDB-based chunked writes to prevent data loss on sessions exceeding 30 minutes; added exponential-backoff upload retry for failure resilience. Built a fallback web recorder for extension-restricted enterprise environments.
- **API Security & Testing:**
Hardened the password reset flow to OWASP A07:2021 compliance via Upstash Redis sliding-window rate limiting, short-lived JWT token caching, reCAPTCHA v3 risk scoring, and honeypot field injection detection. Established Vitest testing infrastructure from zero — covering Auth0 middleware, token refresh, signup routes, and Stripe/Intercom/Mixpanel integrations.
- **Frontend Revamp:**
Sole intern on a full-stack Next.js 14 App Router rewrite (TypeScript, Tailwind CSS, shadcn/ui, Framer Motion); architected a typed REST client abstraction layer, Zod-based form validation, and webhook-driven optimistic UI for async event reconciliation across the Organization module.

Projects

Plotline (plotline.akshitbansal.me)

January 2026

Plotline is a personal media tracking platform that serves as your all-in-one hub for movies, series, anime, manga, and games.

- Designed and developed a responsive full-stack web application for logging, rating, and organizing media across five categories — movies, series, anime, manga, and games.
- Implemented secure authentication and user-specific data storage to keep libraries private and persistent across sessions.
- Developed dynamic collections, status tracking (watched, plan to watch, completed), and catalogue search to make managing a large library effortless.
- Integrated rich metadata; posters, cast, director, release year, episode/season info, and genres for a visual, information-dense browsing experience.

Open Tools (open-tools.akshitbansal.me)

December 2025

Open Tools is a growing, open-source collection of local-first browser utilities; covering audio, video, PDF, image, SVG, color, and dev workflows; where every tool runs entirely client-side with zero data leaving your device.

- A local-first browser utility platform (35+ tools) spanning audio/video processing, PDF manipulation, SVG tooling, and design utilities; zero server involvement, all computation client-side.
- Delivered FFmpeg WASM-powered audio/video pipelines (format conversion, trimming, merging, frame extraction) entirely in-browser, eliminating backend infrastructure and preserving user data privacy by design.
- Architected Next.js 14 App Router codebase with isolated per-tool routes and zero shared state, enabling parallel feature development and clean separation of concerns across 8 tool categories.
- Shipped production-grade CSS and SVG generators (glassmorphism, blob, box-shadow, SVG animator/optimizer) with real-time preview and copy-ready output, bridging developer and designer workflows.

Canopy (canopy.akshitbansal.me)

January 2025

Canopy is a modern web-based bookmarking platform that helps users save, organize, and rediscover web links effortlessly through a clean and intuitive interface.

- Designed and developed a responsive full-stack web application for managing and organizing personal web bookmarks.
- Implemented secure authentication and user-specific data storage to ensure privacy and persistence across sessions.
- Built reusable UI components and protected routes to provide smooth navigation and a consistent user experience.
- Developed dynamic categorization, tagging, and search features to enable fast and intuitive link discovery.
- Added metadata extraction (title, description, favicon) to enhance saved links and improve visual clarity.
